### **EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Christopher Bennett on 06/24/2010.

The application has been amended as follows:

#### **Replace the abstract with the following:**

A surface acoustic wave sensor for detecting a target substance by measuring the change in frequency due to the mass applied to a reaction membrane placed on a surface acoustic wave element having high sensitivity due to the improvement of the surface acoustic wave element structure. The surface acoustic wave sensor includes an SH-type surface acoustic wave and a rotated Y-cut LiTaO<sub>3</sub> substrate having Euler angles (0°, 120° to 140°, 0° ± 5°); electrodes principally containing Au, for exciting a surface acoustic wave, the electrodes being arranged on the LiTaO<sub>3</sub> substrate; and a reaction membrane bound to a target substance or a binding substance bound to the target substance covering the electrodes arranged on the LiTaO<sub>3</sub> substrate. The interdigital transducers have a normalized thickness of about 3.0% to about 5.0%, the normalized thickness being determined by normalizing the thickness of the interdigital transducers by the wavelength of the surface acoustic wave.

### **REASONS FOR ALLOWANCE**

2. Claims 10, 12-14, and 18 are allowed.
3. The following is an examiner's statement of reasons for allowance:

Regarding independent claim 10, the prior art of record fails to teach or suggest a surface acoustic wave sensor comprising: a rotated Y-cut LiTaO<sub>3</sub> substrate having Euler angles of (0°, 120° to 140°, 0° ± 5°); electrodes, principally containing Au, and arranged on the LiTaO<sub>3</sub> substrate to excite a surface acoustic wave; and a reaction membrane, bound to a target substance, covering the electrodes arranged on the LiTaO<sub>3</sub> substrate; wherein the electrodes have a normalized thickness of about 3.0% to about 5.0%, the normalized thickness being determined by normalizing the thickness of the electrodes by the wavelength of the surface acoustic wave; the surface acoustic wave element is a resonator type surface acoustic wave element; and the electrodes include at least one interdigital electrode and reflectors arranged on both sides of the at least one interdigital transducer in a direction of propagation of a surface acoustic wave.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Conclusion***

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to ROBERT EOM whose telephone number is (571)270-7075. The examiner can normally be reached on Mon.-Thur., 9:00am-5:00pm, EST.
